Post Engineer Candidate Coding Exercise

This coding exercise can be submitted via a zipped file containing the plugin or shared in a github repository.

The exercise is fairly simple but touches on some key areas of WordPress & php. We are looking for familiarity with coding practices in WordPress, efficiency and code quality.

Create a WordPress plugin that:

1) Registers a new custom post type named "Example CPT"
2) The custom post type should have the same user capabilities as normal the core 'post' post type
3) Register a custom meta field for this post type named "Example Meta"
4) Make a text box available in the post type for managing this meta field
5) Display the meta field and its values in the wp-json/wp/v2 rest api response for the CPT
